#### New Orleans, LA

November 3, 2018

#### Scottsdale, AZ

November 11, 2018

Diabetes Trends is presented by Horizon CME in collaboration with the Nurse Practitioner Healthcare Foundation (NPHF). The goal of this program is to foster collaboration, share best practices and provide a forum for peer-to-peer interaction among primary care physicians and advanced practice providers who are actively engaged in the clinical care of diabetes patients. Through case-based presentations, hands-on demonstrations and small group workshops, this 1-day program will provide learners insights into the latest developments and important current concepts in the treatment of diabetes patients. Additionally, the program offers a unique opportunity to discuss, develop and present treatment plans for patient cases. The intimate learning environment also facilitates interaction between attendees and faculty so that clinicians can discuss practical patient management issues and then apply their learning when they return to practice.
